

Dark fibre

Virtually unlimited bandwidth

Elite has access to over 5000 km of regional fibre networks. These run the length of the UK. This network of fibre enables us to offer you access to virtually unlimited bandwidth that avoids the cost and time delays of laying new fibre.

Our dark fibre service allows you to exploit the full potential of fibre, and can be presented as dark fibre for you to manage and add equipment according to your own requirements, or as a fully managed network service based on a dedicated fibre.

Benefits

- **Scalability**
Virtually unlimited bandwidth to cater for your every need through fibre infrastructure which is capable of supporting the latest high capacity DWDM systems
- **Low latency for time critical applications**
- **Lower total cost of ownership**
Costs are detached from capacity, meaning your fibre costs are constant as you grow
- **Reliability**
Dark fibre network availability is typically 99.9999%
