

Total backup

Providing peace of mind

Our total backup solutions provide you with the peace of mind that in the event of data loss, your data is fully backed up and recoverable within minutes. You can try our Elite total backup on a free 14 day trial.

Our new Total Backup solution is developed using R1 Soft Continuous Data Protection software. Working in conjunction with our robust network and our quality service and support, these solutions offer excellent value for businesses wishing to securely protect valuable data.

How it works

As soon as Elite Total Backup is set up a 'full seed' image is created on one of our backup servers. Once complete regular backups can be scheduled using the web-based control panel. The CDP Agent keeps a journal of disk changes. Incremental backups know what sectors have changed before the backup even starts. This eliminates the need for file-by-file comparisons on every backup.

EndUsers can login directly to the Web Interface. After authenticating with the Hosting Panel the user can browse files in their site directory or email from any available CDP recovery point. Data is stored in R1Soft's Disk Safe storage format. This enables CDP to archive point-in-time recovery images for long periods of time using as little disk space as possible. Policies are set to specify the number of different incrementals to keep for each schedule. Old recovery points are automatically deleted according to this policy. This system of hourly, daily, weekly, and monthly recovery point management is flexible enough for all needs.

5GB	10GB	20GB	35GB	50GB
£9.99	£14.99	£24.99	£34.99	£49.99
75GB	100GB	150GB	200GB	300GB
£69.99	£84.99	£124.99	£149.99	£219.99

Features

- Bare metal disaster recovery**
 Restore servers directly from disk-based backup. Unlike traditional backup software there is NO need to first partition your drive and install the operating system
- High performance**
 Servers can be fully operational with minimal performance impact during backups. Backups can usually be performed at any time, even on busy servers
- Small backup windows**
 Only changed disk sectors are copied between backups. Incremental backups can now be completed in minutes
- Open file backups**
 Total backup is a total solution including built in support for backing up open files NO 3rd party software is required
- Snapshots**
 Our solution provides consistent point-in-time system-wide backup images
- New continuous backup**
 The R1 Soft CDP Agent keeps a journal of disk changes. Incremental backups know what sectors have changed before the backup even starts. This eliminates the need for file-by-file comparisons on every backup
- Remote administration**
 Software can be completely controlled off-site using a web-based interface
- Quick and easy setup**
 You could be backing up your data within moments of setting up your account
- Automatic, scheduled backups**
 You won't need to worry about any ongoing data backups. Enabling you to concentrate on your business
- Flexibility**
 What if you need to change your storage plans as your data backup requirements grow? With our flexible solutions this is not an issue. You can upgrade to another package and with plenty of storage available we will cater for your growing requirements

Benefits

- Instant free set-up**
 No waiting, just pay for your service and away you go
- Full control**
 Set your own automatic backup schedule or perform one off manual backups
- No minimum contract period**
 No waiting, just pay for your service and away you go
- 24/7 technical support**
 Regardless of when you have issues, our qualified and friendly staff are always on hand
- Flexibility**
 All of our packages are fully configurable to suit your requirements and can be upgraded at any time
